

## **Should Neurosurgeons Perform Scoliosis Surgery?**

**Haroon F. Choudhri, MD, FAANS**

*Hudson Neurosurgery, Westchester, NY, USA*

Neurosurgeons are increasingly performing more complex spinal surgeries involving fusions and deformity. Scoliosis surgery represents the final frontier of spinal surgery which has not been traditionally performed by Neurosurgeons. This presentation will review the evolution of spinal surgery as performed by Neurosurgeons and develop the case that Neurosurgeons can and should learn and be taught the principles of scoliosis surgery.
