ZEISS KINEVO® 900

Redefining surgical visualization for advanced surgical certainty.

Loaded with over 100 innovations, the all-new Robotic Visualization System™ – KINEVO® 900 from ZEISS is designed to deliver more functionalities than any surgical microscope today. It combines optical and digital visualization modalities, offers QEVO – the unique Micro-Inspection Tool and will impress you with its Surgeon-Controlled Robotics. All to enable you to gain greater certainty in a virtually disruption-free workflow.

ZEISS INTRABEAM® 600

Expanding your radiotherapy environment with targeted effectiveness.

Radiation with INTRABEAM® from ZEISS enables an individual treatment ensuring that skin and deeper structures are protected and a shorter duration of the radiation therapy compared to external beam radiation therapy (EBRT). This can also reduce associated side effects and enhances treatment comfort for the patient – a key element in increased quality of life.¹

Please collect your lunch voucher for the day from ZEISS team at the end of this lunch symposium.
